

## Qba FLOOD - BY THORN

*The Qba is a simple yet modern floodlight, featuring precision reflector systems which can provide intensive or extensive, asymmetrical, or double-asymmetrical beam patterns. The luminaire itself is designed to blend discreetly into modern or traditional building surroundings and is mounted using a cleverly concealed stirrup. In addition to the lighting effect choices offered by the reflector systems, accessories such as colour filters, louvre, visor and barn doors further extend the possibilities for lighting design.*

**HOUSING** Cast aluminum with a grey powder coat finish.

**LENS** Clear tempered glass.

**REFLECTOR** Specular aluminum reflector. Distributions available are symmetric intensive, symmetric extensive, asymmetrical and double-asymmetrical.

**BALLAST** Core and coil ballasts Tri-Tap. Electronic ballasts also available.
