

VIA SQUARE - BY THORN

The VIA Square is a low level, wall recessed fixture with an indirect optical system providing glare free light. With the light source being hidden behind the fascia it is impossible for pedestrians to receive any direct glare. Light is directed to the ground, providing illumination where it is needed and minimizing light spill. The recessed optics offer a high level of vandal resistance.

POUR BOX Formed polypropylene for concrete pour.

HOUSING One piece die-cast aluminum, low copper alloy with a sand textured grey powder coat paint finish.
